

Certificate manual TRiDaBASE

Background:

The TRiDaBASE certificate is issued by the Cultural Heritage Agency of the Netherlands. The TRiDaBASE certificate ensures that TRiDaBASE and underlying code can safely be used. Make sure you have downloaded a copy TRiDaBASE databases from the official DCCD product page:

<http://vkc.library.uu.nl/vkc/dendrochronology/research/ProjectsWiki/DCCD%20Products%20TRiDaBASE.aspx>

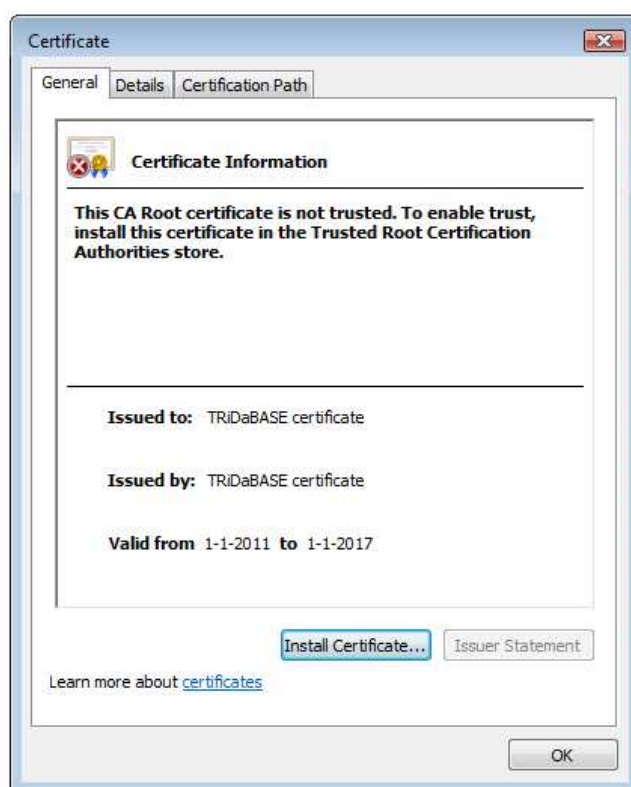

Step 1:

Make sure you copy the TRiDaBASE certificate named "TRiDaBASE certificate.cer" into your TRiDaBASE folder.

Step 2:

To install the certificate please double click on the TRiDaBASE certificate.cer and click on "install certificate" see figure 1.

Note: Although the certificate information mentions that the CA Root is not trusted, this certificate is issued by the DCCD and is needed to run TRiDaBASE safely.

Note on figure: Installing certificate. Depending on the operating system this form may differ slightly.

Step 3:

The Certificate import wizard will start. To continue click “next”.

Note on figure: Installing certificate. Depending on the operating system this form may differ slightly.

Step 4:

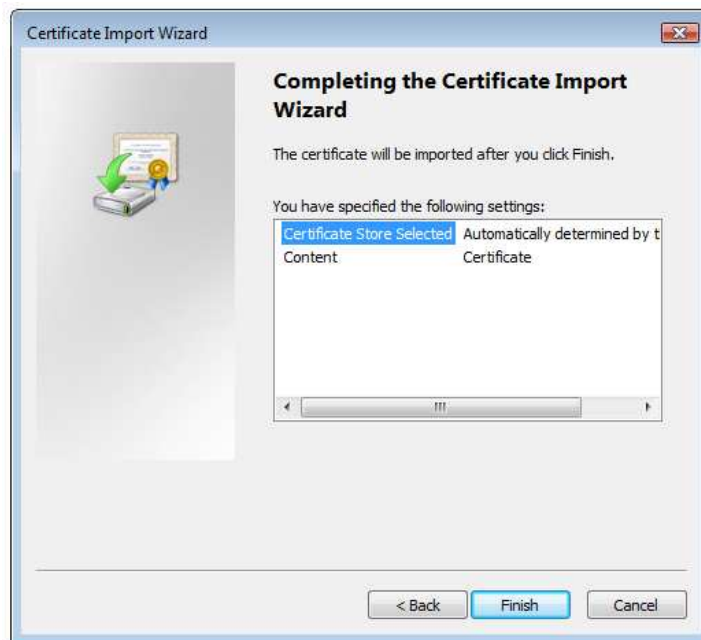

Make sure the first (default) option “*automatically select the certificate store based on the type of certificate*” is selected, and click next to continue.

Note on figure: Installing certificate. Depending on the operating system this form may differ slightly.

Step 5:

Click "finish" to complete the Certificate Import wizard.

Note on figure: Installing certificate. Depending on the operating system this form may differ slightly.

Step 6:

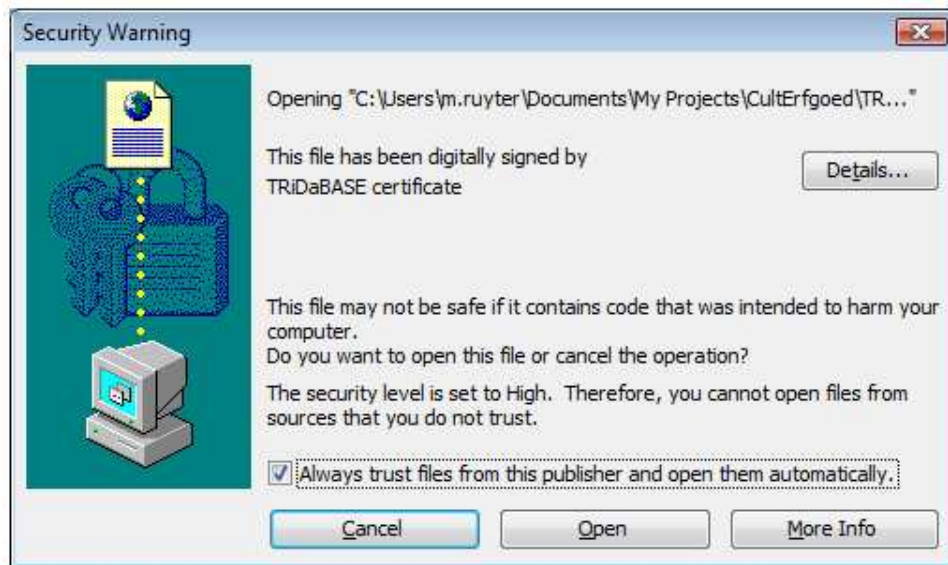

Depending on your computer security settings a warning message may appear. Click "Yes" to trust the installation and complete the certification.

Note on figure: Installing certificate. Depending on the operating system this form may differ slightly.

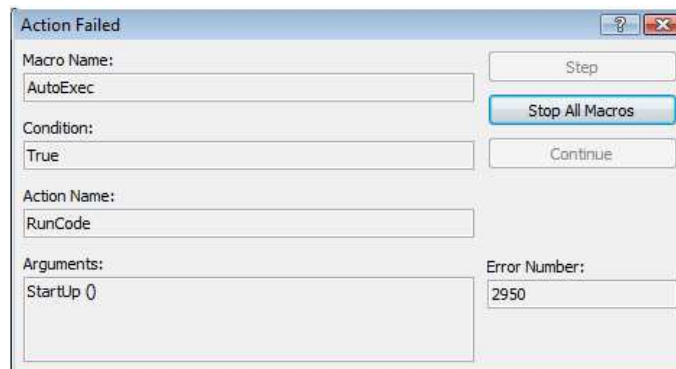

Step 7:

When starting TRiDaBASE for the first time it is necessary to indicate the publisher of the certificate is (always) trusted. If the security in Access 2003 is set to high or medium the following screen will appear:

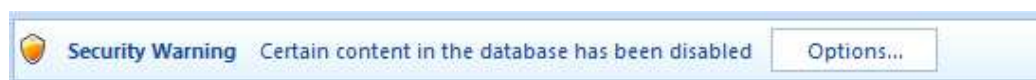

Make sure the box is checked as shown in the figure above. Click open to start the application.

Depending on the security settings in Access 2007/2010 the following screen can appear:

Make sure the button "Stop All Macros" is clicked before you have access to the security warning which shown below (In Access 2010 this bar differs from the picture below. The button "Options" is replaced by the button "Enable content". After clicking this button the application is ready for use).

After clicking on "Options" in Access 2007 the following screen will appear:

Make sure the option "Trust all documents from this publisher" is checked. After clicking this button the application is ready for use.

You now have successfully installed the TRiDaBASE certificate on your computer! You can safely use TRiDaBASE without security problems.
